Since 1964, our mechanical clock has graced the movies, now displayed by astronauts.

A screenshot from an NBC Today show broadcast. The main focus is on astronaut Scott Kelly, who is wearing a dark NASA flight suit with patches for NASA, the Space Shuttle, and the Denver location. He is seated in a room with an American flag and a bookshelf in the background. To the left of the main frame are three smaller video feeds, each labeled 'STUDIO 1A', showing other participants. At the bottom of the screen, a banner reads 'CATCHING UP WITH... SCOTT KELLY' and 'RETIRED ASTRONAUT ON NEW BOOK, SPACE TRAVEL &amp; MORE'. The NBC peacock logo and the Olympic rings are also visible in the bottom right corner.

120-240 VAC, Input 5V/3A

4" female to male HDMI cord  
Remote Control/2AA batteries  
Quick Start Instructions  
Internet required for Live Tracking

Since 1964, the mechanical Geochron has been used as a diplomatic gift, and in movies like "Hunt for Red October".

Today, this American Ingenuity is reborn in a digital world, rendered in crisp 4K resolution and live atmospheric layers.

This stick form factor is designed to hang from an HDMI port. Cable included.
