

A long-awaited update for Geochron Digital!

Zoom this America!

Hi <<First Name>>,

Even though it's Independence Day in the US, we're working to deploy the update carrying our #1 request for Atlas: **Why can't I zoom the map?**

A New Waypoint

You may recall the large rendering update earlier this year, and a big server reorganization... all of it has been pointing to this waypoint: Continental Zooming. We're going to start with North America and Europe, and add more regions in time. More exciting is the new live data we'll be able to display with so much more room on the screen! Radar Weather, Fires, Events... everything you see regionally on your smart phone could be shown for the entire continent at once in 4K.

What will it do?

Watch this [short video](#) to see it in action. We've created a fixed zoom for North America and Europe that is compatible with most of the layers already on the Geochron.

Who will get this?

Anyone with an Atlas 2 Geochron AND a premium subscription.

- Earthquake
- ISS
- Ham Radio Bundle
- Atmospheric Pollution

Why not Atlas 1?

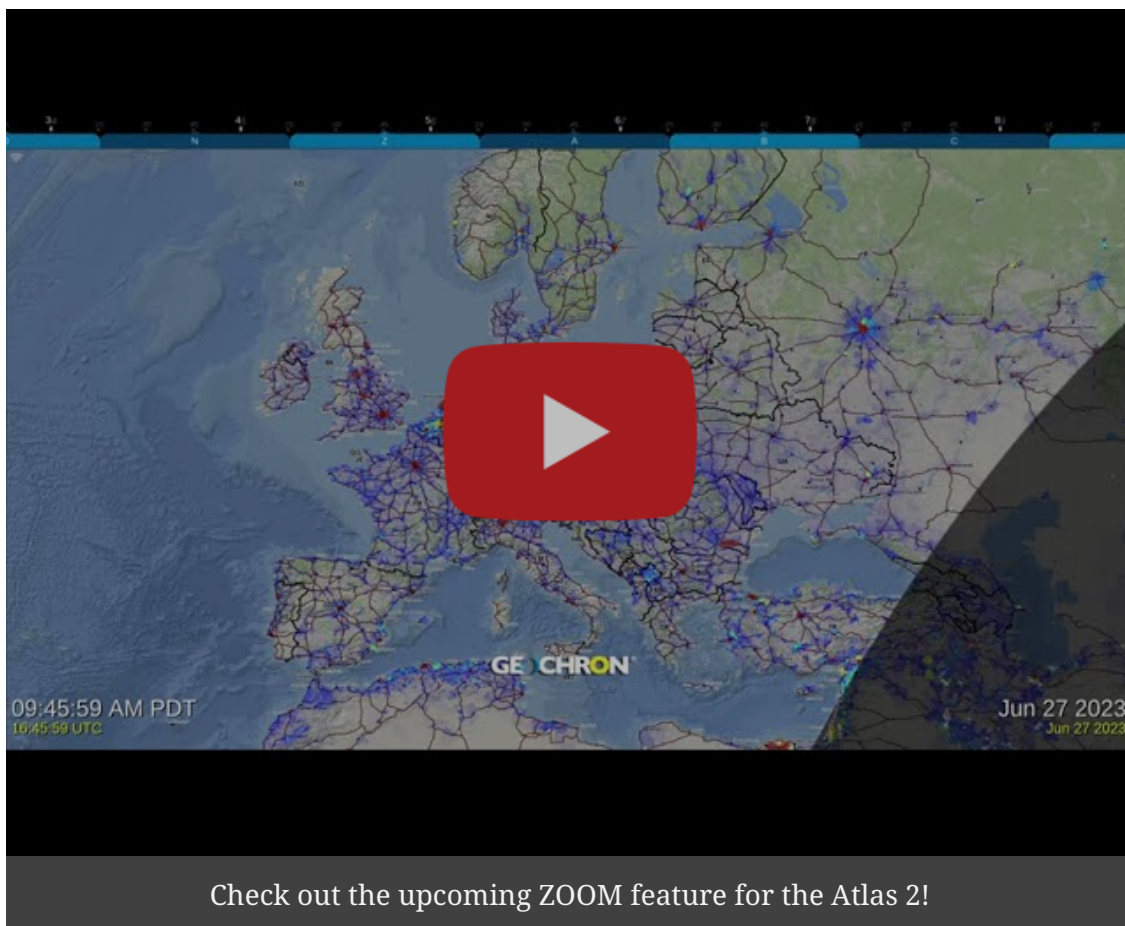

This update is unstable on Atlas 1, creating frequent reboots and unhappy, impatient users. If we can add it to Atlas 1 in the future with new optimizations, we will.

This feature will roll out to Atlas 2 units over the coming weeks.

Batter up for zooming,

Patrick

Head Wrangler, KJ7ZSU
